## Experiment 2

**Student Name:** Ankita

**UID:** 22BCS17162

**Branch:** CSE

**Section/Group:** IOT\_NTPP\_602-A

**Semester:** 6th

**Date of Performance:** 20-01-25

**Subject Name:** AP- 2

**Subject Code:** 22CSP-351

**Aim:**

- a) Two sum problem
- b) Remove Duplicates from Sorted Array
- c) Jump Game

**Objective:** To learn about arrays

**Code:**

a)

```
#include <vector>
#include <unordered_map>
class Solution {
public: std::vector<int> twoSum(const std::vector<int>& nums, int target) {
    std::unordered_map<int, int> numMap;
    for (int i = 0; i < nums.size(); ++i)
    { int complement = target - nums[i];
      if (numMap.find(complement) != numMap.end())
      { return {numMap[complement], i};
      }
      numMap[nums[i]] = i;
    }
    return {};
};
```

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

b)

```
#include <vector>
using namespace std;
class Solution {
public:
int removeDuplicates(vector<int>& nums) {
if(nums.empty())
return 0;
int k=1;
for(int i=1;i<nums.size();i++) {
if(nums[i]!=nums[i-1]) {
nums[k]=nums[i];
k++;
}}
return k;
};
```

c)

```
#include <vector>
using namespace std;
class Solution {
public:
bool canJump(vector<int>& nums) {
int n = nums.size();
int reachable = 0;
for (int i = 0; i < n; i++) {
if (i > reachable) {
return false;
}
reachable = max(reachable, i + nums[i]);
if (reachable >= n - 1) {
return true;
}
}
return false;
};
```

## Output:

a)

☒ Testcase | [Test Result](#)

**Accepted** Runtime: 0 ms

- Case 1
- Case 2
- Case 3

Input

nums =  
[2, 7, 11, 15]

target =  
9

Output

[0, 1]

Expected

[0, 1]

b)

☒ Testcase | [Test Result](#)

**Accepted** Runtime: 0 ms

- Case 1
- Case 2

Input

nums =  
[1, 1, 2]

Output

[1, 2]

Expected

[1, 2]

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

c)

☒ Testcase | ☒ Test Result

**Accepted** Runtime: 0 ms

• Case 1

• Case 2

Input

nums =  
[2,3,1,1,4]

Output

true

Expected

true

## Learning Outcomes:

- Learn to efficiently find pairs of numbers in an array that sum to a target using a hashmap.
- Understand the concept of complementing values to optimize search operations in arrays.
- Gain proficiency in handling edge cases and constraints in algorithmic problems.
- Master the implementation of a FIFO queue using two stacks, ensuring correct operation of queue functions.
